Art Unit: 2665

1. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The five phases (Phase-A, Phase-B, Phase-C, Confirmation Phase, and Phase-E), and seven commands (C1-C7) are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). To be more specific, only three commands and three phases are recited in the claims, which render the claimed invention not enabled.
2. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of claims 1, 4, 7 and 9, it is unclear as to what each of the “first command”, “second command”, and “third command” is representing or what function each command is executed for.

In claim 1, lines 25-26, it is improper for reciting “after the third command is exchanged” since the third command can only be sent from the data circuit-terminating equipment to data terminal equipment.

3. Due to the nature of 112, 1st and 2nd paragraphs problems, no prior art can be used or applied for prior art rejection purpose.
4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Burton et al., Takayama et al., Bailey et al., Averbuch et al., Lee et al., Petty, Sipila, Samson et al., Antol, and Ryu et al. are all cited to show the common feature of duplex data transmission between source and destination data terminal equipments utilizing source and

destination data circuit-terminating equipments and a communication network utilizing communication sequence of commands similar to the claimed invention. The examiner has reserved the right to apply any of the references cited for prior art rejection when the 112, 1st and 2nd paragraph problems have been resolved.
